

1 - Safety instructions and precautions

Warning! • Important safety instructions: keep these instructions. • It is important to follow the instructions to ensure safety. Read this manual carefully before beginning work. PHW is not a safety device but an auxiliary safety device. • This manual is destined solely for technical personnel qualified to perform installation. No other information contained in this file may be considered of interest to the end user. • Installation, testing and commissioning of door and gate automation systems must be performed by skilled and qualified personnel, who are responsible for the tests required to verify the solutions adopted according to the risks present, and for ensuring observance of all local legal provisions, standards and regulations. • All steps in the work required to make the product operative must be performed in compliance with the warnings and instructions included in this manual; users must also comply with local laws, legislation and regulations to ensure the utmost safety for the installer and the final user of the automation system. • Before beginning installation, read chapter 3 and make sure that the parameters in the environment in which the device will be installed are compatible with those specified in point 4.2. In the event of doubt, do not use the product, and ask the Nice technical assistance service for clarification.

Disposal
The product's packaging materials must be disposed of in full compliance with local regulations.

This product is an integral part of the automation system it controls and must be disposed of along with it. As in installation operations, at the end of the product's lifespan, disposal operations must be performed by qualified personnel. The product is made of various types of materials; some of them may be recycled, while others cannot. Find out about recycling and disposal systems in use in your area for this product category. **Important!** Some parts of the product may contain polluting or hazardous substances which, if released to the environment, may cause serious damage to the environment or to human health. As indicated by the symbol appearing here, the product may not be disposed of with other household wastes. Separate the waste into categories for disposal, according to the methods established by current legislation in your area, or return the product to the retailer when purchasing a new version. **Important!** the product operates with batteries which may contain pollutants and must not be disposed of with ordinary wastes. After removing the batteries, dispose of them by the methods permitted by local regulations. **Important!** local regulations may provide for heavy fines if the product is disposed of inappropriately.

2 - Product description and intended use

PHW is a pair of photocells formed of a transmitter (TX) and a receiver (RX). The two elements form a type "D" presence detector (under standard EN 12453); this system is for the exclusive use on automations for gates, garage doors and similar devices. The system makes it possible to detect the presence of an obstacle when it interrupts the infrared beam present between the two elements. In technical terms, the TX transmits the beam to the RX; this notifies IBW of the status of the beam (present or interrupted) via radio link. The central unit reacts appropriately. TX and RX are supplied by a battery which is automatically recharged by solar energy transformed by a photovoltaic cell and accumulated in 1 rechargeable 1.2V AAA NiMH battery. **■ Duration of charge from solar cell up to 15 cycles/day** (1 cycle = opening and closing), with a maximum cycle duration of 60 seconds. **■ Duration of battery charge (without sun)**: estimated 10 days when performing 15 cycles/day. **■ Radio communication**: two-way, on 7 channels in the 868MHz band. **■ Radio protocol**: high security; compatible with Nice's Solemyo Air Net System radio technology. **■ Useful radio range (under optimal conditions)**: 40m. **■ Radio security**: class 3 under standard EN 13849. **■ Protection rating**: IP 44. **■ Operating temperature**: -20°C +55°C. **■ Dimensions**: 95 x 57 x 42 mm. **■ Weight**: 200 g (TX + RX).

3 - Limits on use
PHW is compatible exclusively with Nice devices systems employing Solemyo Air Net System radio technology. Additional operational limits are to be inferred from the data shown in the "Technical Specifications" chapter.

Important notes:

(*) The estimate of the average number of cycles per day applies to devices installed and used under the following conditions: • photovoltaic cell oriented in the correct direction; • installation of the device at medium latitude (such as that of Switzerland); • device used in winter; • clean photovoltaic cell surface. The variations to which these conditions are subject have an impact on the average number of maneuver cycles per day.

(**) The range of the reception and transmission devices may be affected by other devices operating at the same frequency in the vicinity (such as radio headsets, alarm systems, etc.) which cause interference in the system. The manufacturer cannot guarantee the actual range of the radio devices in the presence of continuous strong interference.

CE declaration of conformity

Declaration in accordance with Directive 1999/5/CE. PHW and PT50W are made by NICE S.p.A. (TV): NICE is a Nice S.p.A. trademark.

Note - The content of this declaration corresponds to the declaration made in the official document filed in the offices of Nice S.p.A., and particularly the latest version thereof available prior to the printing of this manual. The text contained here has been adapted to meet editorial requirements. A copy of the original declaration may be requested from Nice S.p.A. (TV). Declaration number: 386/PHW; Revision: 0; Language: EN

4 - Programming and installation**4.1 - Programming**

01. Dismantle each photocell as shown in fig. 1 (it is not necessary to dismantle it any further).

02. Choose the operating mode for the pair of photocells. In the instruction manual of the central unit on which the photocells must be installed, consult the table with the photocell operating modes and select the function to be assigned to the pair of photocells. Please note that the operating mode for the wireless photocells is the same as that for wired photocells. Then insert jumpers in the TX and the RX, in the position corresponding to the chosen function. **Important!** Each pair of photocells must have a different function from those assigned to other pairs of photocells.

03. Programming and testing the pair of photocells. With the device still open, refer to the IBW interface's instruction manual and perform all the activities involved in **programming and testing the pair of photocells**. Refer to fig. 4 to identify the Leds, button and jumpers mentioned in the instructions.

4.2 - Installation

Important – The rear base of the photocells should preferably be mounted on the wall after programming and testing the pair of photocells. It may be necessary to move the photocell a few centimeters during testing – and therefore move the supporting base – to improve radio transmission and reception between the automation device and the central unit.

01. Choose the orientation and the position in which to install the photocells. Read the text in the following paragraph. PHW must be positioned in the position shown in fig. 2.

The undersigned Luigi Paro, as Managing Director of the company, hereby declares under his own responsibility that the product: • manufacturer: NICE S.p.A. • address: via Pezza Alta n°13, 31046 Rustignè di Oderzo (TV) Italy • product type: Nice wireless photocell with column • model / type: PHW, PT50W • accessories: no, conforms to the essential requirements specified in article 3 of the following community directive, for the products' intended use:

- Directive 1999/5/CE OF THE EUROPEAN PARLIAMENT AND COUNCIL, dated March 9 1999 regarding radios and communications terminals and reciprocal recognition of their conformity in accordance with the following harmonized standards. • Protection of health (art. 3(1) (a)): EN 50371-2002 • Electrical safety (art. 3(1)(a)): EN 60950-1:2006 + A11:2009 • Electromagnetic compatibility (art. 3(1)(b)): EN 301 498-1 V.1.8:2008, EN 301 498-3 V.1.4:2002

• Radio spectrum (art. 3(2)): EN 300 220-2 V.2.3.1:2010

In accordance with directive 1999/5/CE (annex V), the product is classified as class 1 and marked: **CE 0682**

Oderzo, July 7 2011

to which the photocells are connected to analyze the device's radio reception.

4.3 - Maintenance
Photocell maintenance does not require any special measures. To keep battery recharging efficient, keep the surface occupied by the photovoltaic cell clean. Clean the device with a soft, slightly damp cloth. Do not use cleaning products containing alcohol, benzene, abrasives or similar products. These can make the cell's shiny surface opaque and reduce the efficiency of recharging.

4.4 - Replacing the batteries
The Tx and Rx batteries are rechargeable, and tend to lose some of their capacity after 4 or 5 years, so that the battery low signal appears frequently. This means they must be replaced. Refer to fig. 5 for information on how to access the battery compartment. Follow the instructions when replacing the batteries: insert the new batteries with the correct polarity; after inserting the batteries check that the leds flash and check the meaning of this test.

4.5 - Diagnostics and meaning of flashing LEDs
Leds "A" and "B" (fig. 4) of the TX and RX elements flash when batteries are being inserted, during execution of a maneuver or during performance of the device's "Check functioning" test. To interpret the meaning of these flashing lights, refer to the manual of the IBW interface.

4.6 - What to do if... (troubleshooting guide)
The device does not behave as expected during a maneuver. This can happen for the following reasons:

a) **Inadequate power.** Check battery charge (refer to the manual of the IBW interface). If they discharge on occasion due to particularly intense use, wait for the photovoltaic cell to recharge them, or recharge them with an appropriate battery charger. If this problem occurs often, it may be due to failure to comply with the instructions in the "Technical specifications" section, or it may be necessary to replace the batteries (point 7.1).

b) **Interference in radio transmission and reception.** The system can tolerate occasional radio interference, but if the device does not behave as expected, there may be significant interference which is preventing communication with the control unit. If the problem continues, conduct the "Check functioning" test described in the manual of the IBW interface

to which the photocells are connected to analyze the device's radio reception.

c) **Incorrect connection of the photocells.** Check the connection of the photocells to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the photocells and connect them again correctly.

d) **Incorrect connection of the power source.** Check the connection of the power source to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power source and connect it again correctly.

e) **Incorrect connection of the ground connection.** Check the connection of the ground connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the ground connection and connect it again correctly.

f) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

g) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

h) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

i) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

j) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

k) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

l) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

m) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

n) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

o) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

p) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

q) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

r) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

s) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

t) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

u) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

v) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

w) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

x) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

y) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

z) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

aa) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

bb) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

cc) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

dd) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

ee) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

ff) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

gg) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

hh) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

ii) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

jj) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

kk) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

ll) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

mm) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

nn) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

oo) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

pp) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

qq) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.

rr) **Incorrect connection of the power connection.** Check the connection of the power connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the power connection and connect it again correctly.

ss) **Incorrect connection of the control connection.** Check the connection of the control connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the control connection and connect it again correctly.

tt) **Incorrect connection of the signal connection.** Check the connection of the signal connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the signal connection and connect it again correctly.

uu) **Incorrect connection of the data connection.** Check the connection of the data connection to the central unit. If the connection is incorrect, the device will not work correctly. If this is the case, disconnect the data connection and connect it again correctly.
