SCP-75 series

Function Description

1.B+,B-

 $Connect \ the \ battery: B+\ connected \ to \ battery \ positive.$

B- connected to battery negative.

2.L

Output voltage detection, detection output voltage or battery voltage (if battery is used). L=output voltage $\frac{+0.7}{0}$ V.

3.+V,-V

Output voltage. Can't connect the battery.

4.CN2

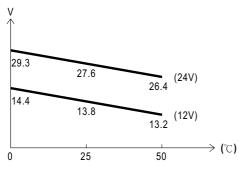

Temperature sensor can be connected to the unit to allow temperature compensation of the charging voltage.

If the sensor is not used, the charger still works normally.

Reference example:

Connect 100K Ω Thermistor(THINKING) on NTC. Adjust VR to cause the output voltage is normally voltage. The output voltage will change along with the temperature change.
